

TriflexAIR 2.0

The ultra-light floor system that converts any vehicle into a multifunctional Wheelchair Accessible Minibus

TriflexAIR 2.0

Improved weight, universality & compatibility

TriflexAIR 2.0 makes it possible to quickly and easily convert any standard vehicle into a multifunctional Wheelchair Accessible Minibus. TriflexAIR 2.0 has a fully integrated wheelchair restraint system designed for minibuses. This new innovative flooring system is up to 35% lighter than the original, depending on the configuration lay-out. The construction contains compact elements for easy shipping and stocking.

We assemble & convert

We pre-assemble, you convert

All-in-one DIY Kits

Ultralight system

TriflexAIR did set a new standard in safety for passenger and wheelchair transport! Not only because of its extreme user-friendliness, but also because of its ultra light construction. TriflexAIR is the lightest available - fully integrated - wheelchair restraint system for minibuses in the world. Its ultra light aluminium construction is lighter than any other similar floor system. Thanks to this it will not only save lots on fuel consumption but also on energy and CO2 emissions!

100 ready to install

We offer complete flooring kits for vehicle body builders including an easy installation manual for fast building. In close collaboration with our Innovation and Engineering department we have created light-weight prefab materials to reduce installation time. To minimise installation time we offer several training options for your workshop fitters.

Passenger Safety Check

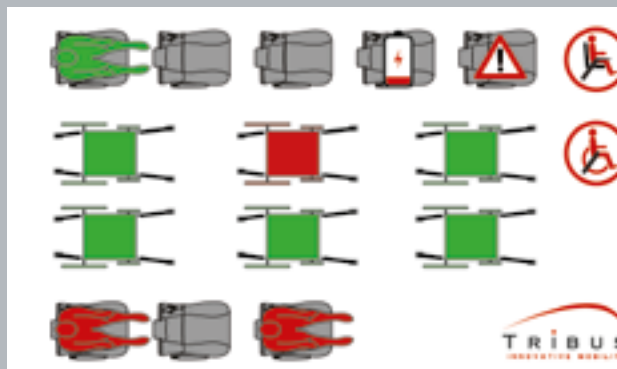

TriflexAIR 2.0 can be upgraded with our new Passenger Safety Check system. This warning system shows the driver if wheelchair passengers are secured. A little monitor next to the steering wheel shows this information with simple icons. As an extra reminder, the integrated red LED strip at the wheelchair position will blink when not correctly secured. The warning system can be extended with the Passenger Safety Check system for TriflexAIR Seats.

Minimum effort

With TriflexAIR, securing and releasing wheelchairs is a simple task for everyone that requires no physical exertion. The wheelchair locking system is fully incorporated into the floor and is completely self tensioning. A simple movement of the central lever will unlock the four retractor belts at the same time.

Maximum safety

With space up to 5 wheelchairs or 8 seats, a large variety of seating and wheelchair configurations are available to meet specific needs. All layouts are fully tested to low volume type approval or European Type Approval. The fully integrated 4-point wheelchair passenger securement system guarantees safeness at all times.

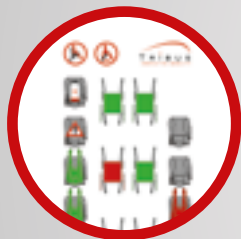

Integrated **wheelchair restraints**

100% mechanical & fast to operate

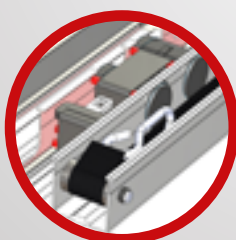

Safety check
